

Dr. Schulze's

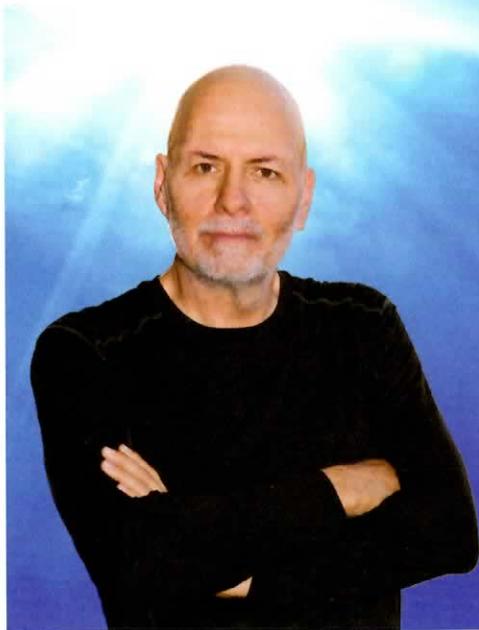

CORONAVIRUS SPECIAL REPORT

America STRONG

INSIDE:

- Shocking Coronavirus Interview with Dr. Schulze
- The REAL Coronavirus FACTS, And What You Should Do Now!

Coronavirus INTERVIEW and **FACTS** with Dr. Schulze

Dr. Schulze, is the Coronavirus **different** than the regular seasonal Flu?

No, it's just another flu. The annual seasonal influenza is the only reoccurring epidemic in America, KILLING between 30,000 and 80,000 Americans every year. On average, about 50,000 Americans die every year from the flu. Some bad years it has killed 100,000 Americans (Hong Kong Flu 1968-69), and even 125,000 Americans (Asian Flu 1957-58). NOTE: If we adjusted these death tolls for today's population density, they would have been considerably higher. The population of America has doubled since 1957, therefore, the adjusted death toll today would be 250,000 Americans dead—much higher than Coronavirus.

Two years ago, in 2018, the flu killed over 80,000 Americans! So what is different is not the flu, but our new, almost panicked, response to the flu.

If it's "just a flu" as you say, then why are so many people **dying** from it?

Actually, they aren't! You must realize that this year's Coronavirus mortality numbers have been counted in a dramatically exaggerated way than in any previous years, which has artificially inflated the supposed virus death toll substantially.

Even if you believe the reported numbers, with about 70,802 dead so far (as of May 6, 2020), these

Coronavirus deaths are still below the 2018 deaths from the regular seasonal flu, and far below the flu season numbers of 1969 and 1958. With the flawed accounting (I will talk about next), this number will rise, of course, but it will not get even close to the 250,000 dead Americans that the medical authorities predicted initially. That many haven't yet died (to date) in the ENTIRE WORLD. It seems the current mortality rate is about the same as the seasonal flu, or even lower. I DO NOT believe these death toll numbers, as many doctors don't. The real death toll is probably about 45,000 (about half the reported amount), which puts it right in line with the seasonal flu.

What do you mean by saying, **I DO NOT believe** in the Coronavirus death numbers?

The death toll is highly exaggerated, and here is why... Medical doctors and medical researchers across America report that the 70,000 death toll includes people who died from heart disease (600,000 deaths annually), cancer (600,000 deaths annually), and stroke (150,000 deaths annually). It also includes people who died from COPD, asthma, and other lung diseases (140,000 deaths annually), diabetes (100,000 deaths annually), Alzheimer's disease (100,000 deaths annually), and kidney disease (75,000 deaths annually) plus other diseases.

The government announced it would pay hospitals \$13,000 for every patient admitted with Coronavirus, and \$39,000 if they put the patient on a ventilator.

(NOTE: This caused hospitals to rush to buy ventilators to get triple their revenue.) You should be aware that to be placed on a ventilator, they insert a 10-inch tube down your throat into your lungs, and they heavily sedate you, so you don't fight this. Then, the ventilator breathes for you, and you no longer have control over your breathing. Another reason why you are heavily sedated is to keep you from panicking and fighting to breathe on your own. You should also be aware that many doctors believe that using ventilators for Coronavirus killed more people than it helped.

Please **Explain** This

Beyond the \$39,000, additional funds were given to hospitals if the death was due to Coronavirus. So Coronavirus deaths include anyone who tested positive, or **who didn't test positive but were "believed" to be positive**, even though they died from one of the other causes I mentioned earlier.

In other words, if a person comes to the hospital emergency room after smoking cigarettes for 40 years and has a heart attack, a stroke, or COPD and dies from it, the attending medical doctors are pressured and forced to list this death as caused by Coronavirus. Even if this person's death was completely unrelated and caused by heart disease, stroke or diabetes, or any other disease or organ failure, **it was logged as death due to Coronavirus. And, billions of dollars are being paid for this reporting.**

Typically, influenza is NOT counted as the cause of death if other diseases are present, so our counting of Coronavirus deaths is grossly inflated compared with how we have counted influenza deaths every year up until now. Our government is subsidizing one of the biggest industries in America (Hospitals) and paying them BILLIONS and BILLIONS of dollars to cover all their costs treating Coronavirus patients because hospitals lost so much money not doing elective surgeries. Poor hospitals, they need money so badly—what a joke.

Recently, Dr. Deborah Birx, head of the White House Task Force, explained the 7-page government document sent to hospitals. She says hospitals were reporting Coronavirus deaths without testing for Coronavirus and with no evidence that the patients died from Coronavirus. In a press conference, she admitted, and I quote: **"We have taken a VERY LIBERAL APPROACH to counting mortality numbers of Coronavirus."**

What happened in **New York City?**

Viral outbreaks are almost always worse in congested, urban, highly populated areas. In crowded cities, population density and concentration make viral transmission easier because there are more people per square mile. Also, in colder climates, there is less air circulation and less fresh air because people are indoors with their doors and windows closed. These conditions make it easier for influenza droplets to spread (through coughing and sneezing in enclosed spaces). **Both population density and less fresh air circulation help the virus to spread quickly.** Additionally, cold temperatures will naturally depress immune function. This is probably why California—with a population of 40 million—has only had about 2,000 deaths.

What about **Italy?**

In Italy, the 2019 flu vaccine was used widely early last year. It contained four strains of influenza, including dog-derived material (I will explain later) and the H1N1 virus. It turns out this vaccine increased your risk of getting Coronavirus by 36% or even up to 500% as published by the American military (who discovered this by accident after they used the same vaccination.) I have a copy of that Department of Defense 2017-2018 document and the United States National Institute of Health document which state:

"Receiving this influenza vaccination may increase the risk of other respiratory viruses, a phenomenon known as virus interference."

"Vaccine-derived virus interference was significantly associated with Coronavirus."

"Examining non-influenza viruses specifically, the odds of both Coronavirus and human metapneumovirus in vaccinated individuals were significantly higher when compared to unvaccinated individuals."

Considering the average age of death in Italy was 80, added to the above information, I think we can determine what happened there.

Is Coronavirus **new**?

No, it's been around for about 50 years and was first discovered in the 1960s. For 50 years, the Coronavirus has traveled around the world, mutating many times, infecting everything from cats to camels and then back to humans. Animals have many different Coronaviruses that have not infected humans... yet. COVID-19 is the seventh known Coronavirus mutation to attack humans. **We've identified seven different Coronaviruses to date:** 229E, NL63, OC43, HKU1, MERS-CoV (also known as MERS or Middle East Respiratory Syndrome), SARS-CoV (SARS or Sudden Acute Respiratory Disease), and finally, SARS-CoV-2 (the current COVID-19 or Coronavirus 2019).

What about developing a **vaccine** for Coronavirus?

For 50 years, the WHO, the Center for Disease Control, medical groups, research hospitals, and drug companies have tried to develop a vaccine for the many strains of Coronavirus. **THEY HAVE ALL FAILED!**

Why they have failed is simply because all viruses do what's called "shift" and "drift," which means they constantly mutate and change. These mutations are why—almost every single year in America—the annual flu vaccine is a complete failure. **Therefore, there is NO VACCINE for any Coronavirus.**

"There is no evidence that any influenza (virus) vaccine thus far developed is effective in preventing or mitigating any attack of influenza. The producers of these vaccines know that they are worthless, but they go on selling them anyway." — Dr. J. Anthony Morris, former Chief

Vaccine Officer at the FDA and the National Institute of Health

Do you think **vaccines** are **dangerous**?

Well, you already read above the facts reporting that last year's influenza vaccine skyrocketed your chances of getting Coronavirus.

I remember when the CDC predicted the Swine Flu Pandemic back in 1976. They believed 50 to 60 million Americans would be infected, and hundreds of thousands would be dead in the streets. (Sounds like this year?) They suggested vaccinating 80% of Americans to protect them from this possible pandemic. They believed it was another Spanish Flu of 1918. They made 100-million flu shots, the drug companies made billions of dollars, and 49-million Americans were unnecessarily vaccinated. It was the pandemic that never happened. Nobody got sick—only one person in America. **ONLY ONE AMERICAN DIED FROM THE SWINE FLU!**

What did happen was the immunization program was halted because the vaccine was making hundreds of people sick (even killing some Americans) from a rare nervous system disease. Meanwhile, 49 million Americans were inoculated before the government halted it, again, because only one person in America died from the swine flu. The pandemic never happened, but the vaccine killed many.

In America, there are an estimated over 100,000 adverse reactions, hospitalizations, and injuries from the flu vaccine each year. The latest flu vaccines contain dog kidney cells and DNA, as well beta-Propiolactone (a known carcinogen), Formaldehyde (embalming fluid and a known carcinogen), and Mercury (a vaccine preservative) and a toxic, poisonous heavy metal that kills brain, nerve, and immune cells.

I don't think we know enough to be injecting dog, monkey, and other animal pus into our bodies, let alone highly toxic and poisonous chemicals.

Coronavirus: An Offensive **Biological Warfare Weapon**

Dr. Francis Boyle is a world-expert on Biological Weapons and a professor of International Law. He was the author of the Biological Weapons Anti-Terrorism Act of 1989, which was immediately and unanimously passed by the house and senate, and signed into law

by President Bush in 1990. Dr. Boyle states that Coronavirus is an Offensive Biological Warfare Weapon developed in Wuhan, China and, at-minimum, it escaped from their only level-4 facility, a DSL-4 laboratory there. He says the simplest explanation is that

it is a criminal act, whether an accident, or an offensive strike. He also said Bill and Melinda Gates have been funding companies that make Biological Weapons, and that Bill Gates has been quoted as saying, "The world would be a better place with less people."

Why did we **shut down** America?

I have no idea! Never before have we quarantined healthy people and shut down the entire country.

In the past, medical authorities have only quarantined the sick and infected. Many immunologists feel we have made a huge mistake shutting down America. If anything, we have weakened our immune systems by doing this, not strengthened them. Why big businesses like Home Depot, Costco, grocery stores, and other big companies were left open while parks, beaches, and churches were closed, is beyond me. We will probably never know the truth about this virus, but if anything comes out of this, I hope it opens our eyes to bringing more American businesses back onto American soil (like Dr. Schulze's American Botanical Pharmacy.)

What do you think of **washing hands, hand sanitizer, and wearing masks?**

For over 40 years, I've told my patients in the clinic—and my customers every year in my newsletters for 25 years now (see my

October 2019 Special Report)—that, during the cold and flu season, you need to:

1. **Wash your hands** with soap and hot water ten times a day!
2. **Avoid sick people** or practice the new, politically-correct term “Social Distancing.” Either way, run away from them, don't be polite, and tell them to get the hell away from you.
3. **Avoid crowds**, keep your hands away from your face, nose, mouth, and eyes, and get plenty of fresh air!

Dr. Schulze, **do you have any final remarks?**

YES, of course. Beyond all the politics, all the science, the trillion-dollar agendas, the misguided calculations, fake numbers, fake news, the authorities like Dr. Fauci—who are allowed to develop and own

patents for vaccines (a bit of a conflict of interest here, I think)—beyond Bill Gates who wants to vaccinate the world, all the evil Communist leaders who want us destroyed, biological warfare, Wuhan viral labs or Chinese wet markets—where some very unclean people eat disgusting snakes, dogs, and bats (I've been to China, and I've seen it.) Or the fact that we need to learn to stop forcing American businesses offshore with too many regulations and get Americans back to work by manufacturing more products here... beyond all of this...

If we learn anything from this Coronavirus epidemic, I hope it is simply that we learn to have a healthy respect for the cold and influenza season that happens every year in America, yet we do nothing about it. This annual epidemic that KILLS 30, 40, 50, up to 60,000 or more Americans each year! It's time to stop being politically correct and start quarantining SICK people with colds and influenza, so they don't kill people. And, take the three basic precautions I mention above.

Above all, as a nation, we need to GET HEALTHIER, strengthening our bodies and our immune systems. We need to lose weight, get in shape, move more, eat better, get better nutrition, keep our bodies clean and GET STRONG, AMERICA STRONG!!!!!!!!!!
